# AKIS

AMP Key Injection System

SIMPLE, COMPREHENSIVE KEY MANAGEMENT

The AKIS is a flexible and scalable solution designed to provide key management for Point-Of-Sale devices which ensures terminal compliance and comprehensive data security for entire POS systems. Meeting strict PA DSS standards, the AKIS helps organizations to easily facilitate injection and provides audit-ready records to help navigate the increasing complexity of managing and tracking keys.

SUITE COMPONENTS

AKLA
AMP Key Loading Application

AKIS Server
AMP Key Injection Server

AKLD
AMP Key Loading Device

FKLD
AMP Factory Key Loading Device

HIGH SECURITY

PCI - PA DSS compliant

Secure, cryptogram based key storage

Integrated Tamper-Resistant Security Module (TRSM)

All Device data ports are directly connected to the TRSM

Dual-logins for access, user & group permission control

FULLY COMPATIBILE

3DES (master/session), DUKPT, PIN Encryption, Key Transfer, and BDK

Supports PIN, MAC, Account, Encryption, and Communication key types

Local or remote key injection capabilities

Scalable up to sixteen injections at once

Hardware based encryption for Master Keys

STREAMLINE DEPLOYMENT

Easily & securely import, create, and store keys

No need to re-enter keys for injection, dramatically increasing speed

Eliminates manually loading keys by incorporating secure storage

Eliminates retrieval of keys from digital or paper records

Complete, authenticated audit log files & reports of all activity

USER FRIENDLY

Familiar, lightweight hardware based on our POS devices

Integrated into the firmware of all AMP POS terminals

Works with existing MSP products & partnerships

Simple UI to navigate setup and key management

Works seamlessly with all other AMP POS solutions
