## AMP Terminal Management System

### POWERFUL AND FEATURE-RICH MANAGEMENT FRAMEWORK

Eliminate high POS support costs due to application rollout, incomplete downloads, multiple attempts, and long transfer cycles of system operations with the ATMS. Our system has the ability to effectively and proficiently manage mass updates and support for POS terminals, minimizing downtime and merchant intervention. Let the ATMS navigate the complexities of POS support so the focus can stay on what's important to your business.

#### FEATURES

**Download Automation**  
Precise scheduling and configurations

**Download Recovery**  
Automatically resumes at the point of failure

**Business Intelligence**  
Monitors, collects, and analyzes device-driven data

#### POWERFUL FUNCTIONALITY

- Easily update applications, parameters, and firmware remotely
- Efficiently manage mass-updates and application rollouts
- Seamless multi-platform & multi-device terminal management
- Secure access, permissions, and fraud prevention
- Sophisticated parameter management, including EMV
- Terminal onboarding through various integration channels

#### ENTERPRISE READY

- Reduces manual intervention and eliminates onsite visits
- Status or application upload directly from the terminal
- ATMS Admin Portal provides powerful component management
- ATMS Comm Server to provide scalability and configure download scenarios
- ATMS Monitor to show download/upload status, progress, details, and origin
- Works seamlessly with the AMP Ecosystem - BaseApp, Marketplace, etc.

#### ADVANCED DOWNLOADING

- Schedule device downloads without merchant intervention
- Automation reduces intervention, support, service, and downtime
- Enables downloads in the background and during off-hours
- Downloads resume from the point of interruption instead of restarting
- Greatly reduces download-related communication costs
- Supports multiple servers and multiple application downloads
- No more merchant-terminal interface required

#### REPORTING & ANALYTICS

- Proactively flags and deals with issue to reduce support calls
- Communication with back office or enterprise applications
- Elevates customer/merchant retention & engagement
- Customizable reporting and XML data import/export
- Comprehensive user management and auditing
- Increased data visibility and visualization
- Efficiently collects data from all terminals
